U.S.S.N. 09/974,023 Group Art Unit: 2814

AMENDMENTS TO THE CLAIMS

12. (Currently amended) A device for interconnecting a plurality of circuit devices, comprising:

a decoupling capacitor mounted on a first surface and having a grounding pad and

a power pad formed on a top surface of said decoupling capacitor; and

an interconnect layer having a pattern of circuit connections and being formed over said top surface of said decoupling capacitor, whereby electrical connections to ef said decoupling capacitor are embedded within said interconnect layer and said interconnect layer is disposed between said decoupling capacitor and said plurality of circuit devices,

and whereby said pattern of circuit connections of said interconnect layer is coupled to said decoupling capacitor and said plurality of circuit devices, said pattern of circuit connections coupling to said grounding pad and said power pad of said decoupling capacitor.

- 21. (Previously amended) The device according to claim 12, wherein said pattern of circuit connections includes at least one of the following to interconnect said plurality of circuit devices: a signal plane, a power plane and a ground plane.
- 22. (Previously added) The device according to claim 12, wherein said interconnect layer includes a power plane and a ground plane, and wherein said decoupling capacitor connects in parallel between said power and ground planes.
- 23. (Cancelled)
- 24. (Previously added) The device according to claim 12, wherein said decoupling capacitor comprises a silicon containing dielectric material.
- 25. (Previously added) The device according to claim 12, wherein said interconnecting layer comprises a plurality of aluminum containing conductive paths.

U.S.S.N. 09/974,023 Group Art Unit: 2814

- 26. (Previously added) The device according to claim 12, wherein said interconnecting layer comprises a plurality of copper containing conductive paths.
- 27. (Previously added) The device according to claim 12, wherein said decoupling capacitor comprises a silicon base die decoupling capacitor.
- 28. (Previously added) The device according to claim 12, said decoupling capacitor having a capacitance in the range of 1 to 1000 nf/cm².
- 29. (Previously added) The device according to claim 28, said decoupling capacitor having a capacitance of approximately 50 nf/cm².
- 30. (Previously added) The device according to claim 12, further comprising a plurality of decoupling capacitors mounted on said first surface.
- 31. (Previously added) The device according to claim 12, further comprises at least one resistor mounted on said first surface.
- 32. (Currently amended) The device according to claim 12 30, wherein each of said plurality of circuit devices is are in electrical communication with at least one of said decoupling capacitors.
- 33. (Cancelled)
